

ASSIGNMENT 3: AGE CALCULATOR

A) Marks (40%)

Write the MAIN FLOW of the program of AGE-CALCULATOR, which should first prompt the user for two dates as inputs, it must keep asking again and again the input date(date of birth) if it is invalid and similarly ask for the date of death from the user (keep asking if it is an invalid date of death); after having the two correct dates calculate the Age in days, months and years.

HINT: Use the following functions in the main flow.

- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **DaysInAMonth(_____)**
This function should take a month and a year(if necessary) in parameters and returns how many days in that month.
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **IsLeapYear(_____)**
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **IsValidYearInDate(_____)**
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **IsValidMonthInDate(_____)**
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **IsValidDaysInDate(_____)**
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **IsValidDate(_____)**
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **IsValidDateOfDeath(_____)**
- Write a function (Think properly what must be passed as the parameters and its return type)
_____ **CalculateAgeAndDisplay(_____)**

B) Marks 60%

Take today's date (particularly the day of the week). Calculate what was the day on 14th August 1947 (On the day Pakistan came into being). Then ask any date and tell what was the day of the week on that day.

That day could be any future date or any past date.
