

Programming Fundamentals

LAB # 1

Course **Instructor Name: Faiza Khadim**

LAB Instructor: Qaiser Nadeem

Instructions:

- You have to submit CPP files of the program in a folder, named your Registration Number.
- You have to upload your lab tasks on CMS.
- All program codes should be written in C/C++. Students should use Visual studio compiler for coding.
- Indent and comment your code.
- Use meaningful variable names
- Plan your code carefully on a piece of paper before you implement it.

Learning Objectives:

- Demonstrate knowledge of basic **arrays in** programming C++.
-

Task 1:

Write a C++ program that takes a **word** (character array) as input from the user and checks if it is a **palindrome** .

Expected Output:

Enter a word: madam

Output:

The word is a palindrome.

Task 2:

Write a C++ program to sort the three elements.

Expected Output:

Enter first value: 10

Enter Second Value: 35

Enter Third Value:3

Sorted order is: 3, 10, 35

Task 3:

Write a C++ program add 10 number into the array then and then swap the 2nd and 5th index

Expected Output:

Inputted data: 10 20 30 40 50 60 70 50

Swapped Array: 10 20 60 40 50 30 70 50

Task 4:

Find the largest and smallest and second largest number of an array containing 10 elements. Also display the index of the array where the largest number is found.

Expected Output:

Inputted data: 10 20 30 40 50 60 70

Max Number: 70 at 6th index

Min Number: 10 at 0 index

Second Largest Number: 60 at 5th index

Task 5:

Search an integer from an array containing 10 elements. Also display the number of times it appears in the array.

Expected Output:

Inputted data: 10 20 30 40 50 60 70 50

Enter the value that need to be searched: 50

Output: Found at 4 and 8 index

Enter the value that need to be searched: 100

Output: Not Found

End of LAB 1 😊
